Hi Mike,

I don't have any such information. It's all stuff from the database and then coded in R. And as with anything that involves the LWG, the precise definition of precisely **\*what\*** database we're talking about. It was all so painful...

E

Elizabeth –

We're interested in doing a little uncertainty look at the RAL curve for DDX at RM7 (Figure 3.3-06b) as an example. Do you have a table of the DDX concentrations and associated polygon areas in this SDU? I'm hoping for a simple Excel table.

I realize you might be just a bit busy with other stuff.

- Mike
